PROFESSIONAL SUMMARY

Product-minded software engineer with 7+ years building and shipping zero-to-one products - currently full stack in React, TypeScript, and Go, previously Unity/C# and iOS developer platforms. Combines end-to-end product ownership with integrations, rendering, and rapid execution in ambiguous fintech and deep-tech environments.

PROFESSIONAL EXPERIENCE

TidalWave | Software Engineer | New York, NY Jul 2025 - Present

Agentic AI mortgage point-of-sale platform serving 30+ lending customers across borrower, loan officer, and closing workflows

- Spearheaded an AI-assisted, human-in-the-loop Text-to-Loan workflow using React, TypeScript, and Go APIs, transforming unstructured borrower data into validated loan records and reducing a multi-minute manual setup process to approximately 1 minute in internal testing.
- Partnered with the CTO to re-architect a platform-wide borrower questionnaire framework across React, TypeScript, and Go, building dynamic routing, data prefill, and configurable business rules deployed across 12 production workflows within a platform supporting 73K+ loans and 1.09M events.
- Engineered full-stack refinance and property workflows using React, TypeScript, Go, and Encompass LOS, translating mortgage and TRID compliance rules into data models and synchronization workflows supporting 10K+ refinance loans across 28 lending customers on a platform connected to 20+ third-party systems.

Looking Glass Factory | Software Engineer | Brooklyn, NY

Jan 2019 - Jun 2025

Holographic products, developer platforms, and enterprise conversational-AI experiences

- Led the year-long, zero-to-one productization of Liteforms as main engineer, transforming an experimental conversational hologram into an enterprise AI product using Unity/C#, OpenAI APIs, and Azure Speech, and supporting customer-facing demos for enterprise clients including Accenture.
- Led R&D with the CTO and founding hardware engineer on a real-time Python/OpenCV calibration system adopted across new and legacy display lines, cutting calibration time by approximately 50% and effectively doubling throughput; named co-inventor on U.S. Patent 11,754,975.
- Led the developer-experience layer of the Unity/iOS platform, owning sample UI, setup wizard, pairing and calibration workflows, and developer documentation while collaborating on the underlying native integration.
- Engineered the rendering layer for an ArcGIS-based 3D visualization integration, and contributed Unity, rendering, and interaction engineering to customer projects for Nike, Schrödinger, and early-stage U.S. Space Force prototyping.

TECHNICAL SKILLS

Languages: TypeScript/JavaScript, Go, Python, C#, C++, Bash

Frontend & Product: React, React Native, TypeScript, complex forms, workflow orchestration, data validation

Backend & Integrations: Go, REST APIs, domain modeling, Encompass LOS, asynchronous workflows, external-system integration

AI & Reliability: OpenAI APIs, Azure Speech, human-in-the-loop systems, observability, E2E testing, feature flags

Platforms: Unity/C#, iOS, Python/OpenCV, FFmpeg

EDUCATION

New York University | MFA in Game Design

Sep 2016 - Jun 2018

Communication University of China | Bachelor of Engineering in Game Programming

Sep 2012 - Jun 2016
